Abstract. The Camino de Santiago is a common denominator of European culture so these itineraries, which are public spaces of convergence and harmony, must be respected and promoted. In them, any walker feels like a citizen of the world, which gives him the opportunity to perspective his convictions in a universal sense of openness and tolerance. Associated with the religious factor, the Camino de Santiago provides all participants with contact with European culture and history and, above all, unique moments of adventure, emotion and physical activity. For all these reasons UNESCO classified in 1985 and 2015 as cultural goods of universal importance. The Portuguese routes to Santiago de Compostela are the testimony of the effort of the first kings to ensure the sovereignty of the new kingdom and the conquest of new territories, with history recognizing the effort of characters who stood out in the legitimation of Portuguese ways in the context of European paths to Santiago de Compostela.

Keywords: Camino de Santiago, Cultura, Turismo, Xacobeo, Galicia, Santiago de Compostela, Religion, Art, Sculpture, Architecture.

A Journey through Homes: Relooking the Looking-Glasses of Geographical Partition

Debashis Roy ^[0000-0001-6123-2217]

Swami Vivekananda University, West Bengal, India

Published online: June 29, 2022 | https://doi.org/10.33847/2712-8148.3.1_2

Abstract. The paper addresses Conrad's *The Shadow-Line* and Ghosh's *The Shadow Lines* to bring out the conflict between the Orient and the Occident in the former (with the movement of the naval officer from doubt towards fulfilment) and that of the classical mapping of East and the West in the latter (with the movement away from the 'cultural/classical' fulfilment towards unsatiated doubt). The paper criticizes and counters the absence of any discussion about the common human experiences/events and/or subaltern histories in *Midnight's Children* by focusing on nationalistic criticism present in *The Shadow Lines*. Thus, the paper holds implications and displays a journey through historical events that dismantled and suffocated 'sensibilities'. Furthermore, the paper intends to prove that any journey/trip once taken complicates/problematizes one's identity by making the swift flow between the old and new, past and present gradually impossible. Life, therefore becomes an unending trip forward and backward either by choice or by a lack of choice.

Keywords: Journey, Diasporic Sensibilities, Bengali Psyche, Home.

Investigating the Effect of Ethical Climate on Financial Performance Through the Mediating Variable of Ethical Behavior

Mohammad Reza Behmanesh, Mahboubeh Fatemi [0000-0002-9969-8802]

Attar Institute of Higher Education, Mashhad, Iran

Published online: June 29, 2022 | https://doi.org/10.33847/2712-8148.3.1_3

Abstract. In the current competitive environment, financial performance plays a vital role in evaluating an entity, and ethical climate and ethical behavior are important variables that affect financial performance. Therefore, the present study aimed to explore the effect of ethical climate on financial performance mediated by ethical behavior. The present applied research is descriptive in type. The statistical population included 234 financial managers of Toos Industrial town in Mashhad-Iran, and 116 subjects were selected for the study using a random sampling method. To collect the required data, standard questionnaires of ethical climate, ethical behavior and financial performance were used and to analyze the findings, structural equation modeling (SEM) was used. The SEM results showed that the ethical climate has a positive and significant effect on financial performance and the strength of this effect is increased when mediated by ethical behavior.

Keywords: Ethical Climate, Ethical Behavior, Financial Performance.

Acknowledgments

The present authors thank all the financial managers of the companies operating in Toos Mashhad Industrial Town and the esteemed training management of Mashhad Industrial Towns Company who contributed greatly to this research.

Abstract. Over the past half century, health care has seen incredible progress related to reducing the frequency and severity of harm to patient health and life in the delivery of health care. Nevertheless, the attention of health care scientists and practitioners has begun to increase. The sources of adverse events have come to the attention of health care scientists and practitioners, such as human factor, extra-organizational causes, self-destructive behavior of the patient, which today changes the distribution of sources of adverse events.

The foundation for building a strategic ladder of safe health care should have been based on the management of deviations related to illness, effective communication, patient education, and others.

Key words: health care, patient safety, safe technology, deviance management, human factor.

Published online: June 29, 2022 | https://doi.org/10.33847/2712-8148.3.1_5

Abstract. The Human-Computer Interaction (HCI) manages the plan, assessment and utilization of data and correspondence advancements. From man-made consciousness to social robots and robots for sexual problems, HCI covers a wide scope of uses. Abilities an interdisciplinary methodology, in light of the joint effort between intellectual mechanical technology and kid brain research, for oneself supporting plan of intellectual and conduct abilities in engineered intellectual specialists, including robots, that is animated by thoughts and formative systems found in kids. Cyberpsychology examines every one of the ones mental peculiarities which are identified with age and pursuits to examinations the strategies of substitute welcomed on through the exchange among fellow and the fresh out of the box new media. This paper discusses how artificial intelligence and HCI applications are handling psychological issues that affect health in an efficient manner. The paper explains how AI and human consciousness are interlinked and different factors play a very important role to provide the support for behavioral issues and diseases. The contribution of Artificial Intelligence in transforming HCI is discussed through case studies, applications and systems in the paper.

Keywords: Human-Computer Interaction, artificial intelligence, cyberpsychology, diseases.

Ecotourism Source of Poverty Alleviation and Natural Conservation in Kashmir India

Bilal Ahmad Khan

SCSNEI, JNU, New Delhi, India

Published online: June 29, 2022 | https://doi.org/10.33847/2712-8148.3.1_6

Abstract. Ecotourism is associated with nature and poverty alleviation. Ecotourism is believed to be significant for the generation of income, sustainability of the environment, political enablement of local societies as well as for educational purposes. Ecotourism generates economic benefits at local to national level and thus create incentives to preserve the resources. With its backward and forward linkages with other sectors of the economy, ecotourism is an effective tool for poverty alleviation and ensuring growth with equity. The Jammu and Kashmir has a vast potential to become one of the India's best ecotourism destinations and having numerous attractive and beautiful tourist spots. Ecotourism helps in sustainable development. Ecotourism is believed to be associated with various challenges which are environmental deterioration, inability to contribute to local economy as well as cultural exploitation and deterioration. The study would attempt to explore the potential sites of ecotourism for future development in Kashmir and would examine the correlation between ecotourism and natural conservation with regard to the perception of tourist and conservation agencies. The study is exploratory in nature but empirical tools are also applied to highlight the potential of ecotourism. Jammu and Kashmir is blessed with diverse geographical features, offers a plethora of attractions to tourists. A balance between development and the environment should be created.

Keywords: Ecotourism, Poverty Alleviation, Linkages, Environmental deterioration and conservation.

Aims and Objectives

Published online by Institute of Certified Specialists two times a year since 2020, Journal of Digital Art & Humanities (JDAH) is an international peer-reviewed journal which aims at the latest ideas, innovations, trends, experiences and concerns in the field of the arts & humanities. Our journal bridges the humanities, artistic, and scientific disciplines. It is a nexus for information exchange among academia and industry addressing theory, criticism, and practice.

Topics to be discussed in this journal include (but are not limited to) the following: Art; Art Exhibit Review; Classics; Dance/Music Performance Review; Digital Art; Digital Painting; Excerpts from Global History; Excerpts from Digital Economics; Excerpts from Digital Education; Excerpts from Digital Engineering; Excerpts from Digital Photographs; Excerpts from Digital Technology & Applied Science; Excerpts from Psychology in Digital Age; Fashion as Digital Art; History; Humanities; Language & Linguistics in Digital Age; Literary Reviews of Criminology & Penology; Philosophy; Poetry; Record Review of Social Media; Record Review of Information Systems; Record Review of Accounting History; Religion & Theology in Digital Age; Script of Cyber Security; Script of Digital Public Administration; Script of Digital Pedagogical Technology; Script of Movie/Film; Script of Virtual Reality; Television & Radio in Digital Age; Theater in Digital Age.

Journal of Digital Art & Humanities (J. Digit. Art Humanit.) has **ISSN 2712-8148** registered at the International ISSN Centre. Each published article has been indexed by DOI, ORCID, Google Scholar.
